HE 3.2:

FOREWORD

The Social Security Administration (SSA) has a continuing responsibility, mandated in the original (1935) Social Security Act, for research and study in the general areas of income security and in the assessment of the impact of disability on the economic status of the Nation's population. In carrying out this responsibility the Office of Research and Statistics—the research arm of the SSA—periodically conducts surveys to obtain information on the extent and nature of work disability, and on the economic, medical, and social consequences of limitations in work activity for the disabled person and his family.

The 1978 Survey of Disability and Work was SSA's third major national survey of the disabled. This volume is a compilation of the data gathered in that survey.

The 1978 Survey was planned during a period when the Social Security disability insurance program had grown very rapidly in terms of both the number of beneficiaries on the program rolls and the total amount of benefit payments; since that time, program growth has slowed dramatically. When the survey was conducted some 2.9 million disabled workers and 2.0 million of their dependents were drawing benefits in the amount of $12.5 billion annually. A decade earlier there had been 1.3 million workers and 1.0 million dependents receiving $2.3 billion. Currently, $17.2 billion in annual Social Security disability benefits are being paid to 2.8 million disabled workers and 1.7 million of their dependents.

This volume was compiled by Mordechai E. Lando, Richard Cutler, and Edward Gamber of the Division of Disability Studies, under the supervision of Aaron Krute, Division Director. Mary A. Brown and Sylvia Baskin assisted in table construction and proofing; Leo A. McManus and Robert Ferguson aided in table design. Cheryl L. Bugg and Janet H. Major typed the manuscript. Editorial review was by Alberta P. Thompson of the Publications Staff. Under the direction of Shirley G. Carter, Lucy C. Spriggs and Louise A. Segal of the Office of Research and Statistics, Composition Unit prepared the final text and tables for reproduction, utilizing the System for Automated Text Editing and Composition. Michael Chaney and Gary Orem of the Division of Publications Management, Office of Management, Budget and Personnel, processed the final output for photo-typeset through the Video-Comp 500 at the Government Printing Office.

INTRODUCTION

The databook

This volume presents a detailed picture of the characteristics of the working-age adult population of the United States who considered themselves to have a work disability as a result of their health. Results from the 1978 Social Security Survey of Disability and Work show that of the 127 million adults of working age (18-64) in 1978, 21.9 million (17.2 percent) considered themselves as having a work limitation as a result of a health problem. Almost 11 million (8.6 percent) of the total reported that they were severely disabled—unable to work at all or unable to work regularly. These proportions vary by (a) race—8 percent of whites reported severe disability as opposed to 13.5 percent of blacks; (b) sex—7.4 percent of men were severely disabled as opposed to 9.7 percent of women; and (c) age—severe disability is reported by 2.7 percent of those 18-34, 6.5 percent of those 35-44, 11.3 percent of those 45-54, and 24.9 percent of those 55-64.

This databook was designed to present a wide array of information on the prevalence of work disability in the population, on the characteristics of the disabled, and on the impact of disability on the economic status of the disabled. The tables are divided into four major sections.

Section A (tables 1-37) presents data on the demographic characteristics of the disabled, including age, sex, race, ethnic origin, marital status, family composition, and education.

Section B (tables 38-74) presents data on the presence of activity limitations, on mobility, and on the nature and cause of the chronic health conditions resulting in disability.

Section C (tables 75-119) focuses on the work activity of those with self-reported disability, including information on labor-force status, earnings, and occupation and industry of employment at the onset of the disability.

Section D (tables 120-175) presents data on the economic status of the disabled, amount and source of family income, and the role of income-maintenance programs.

The Survey

The total sample consisted of approximately 12,000 persons. Approximately 6,900 were selected from the 1976 National Health Interview Survey (HIS); 4,600 represented Social Security disability insurance beneficiaries with dates of current entitlement in the 5 years prior to September 15, 1977; and, the remaining 500 represented persons denied Disability Insurance (DI) benefits between January 1 and September 15, 1977.

The questionnaire was pretested in November 1977.[1] The fieldwork and initial processing of data were done by the Bureau of the Census. The full-scale survey was administered from July 1978 to September 1978. There were 9,859 completed interviews. Noninterview rates were 17.9 percent for the HIS sample and 13.9 for the SSA sample.

For further details on questionnaire construction and sampling see: Barry Bye and Evan Schechter, A Technical Introduction to the 1978 Survey of Disability and Work," Report No. 1, Social Security Administration, Office of Research and Statistics, January 1982. Also available is a chartbook, Work Disability in the United States," Social Security Administration, Office of Research and Statistics, December 1980.

A series of survey reports is planned. Among the topics to be covered are: the economic status of the disabled; public awareness of the availability of disability benefits; the epidemiology of disability; the shape of work disability; and work orientation, disability, and employment. Researchers who wish to do further analyses on their own can purchase a copy of the public-use data file and documentation of the survey for $255 by contacting Sylvan Hack (301) 594-0708.

Appendixes

Appendix A: Definitions

The Sample

The population estimates are based on a national sample of civilian noninstitutionalized adults aged 18-64. There are approximately 9,900 sample respondents. Each respondent carries a weight that indicates the portion of the population he or she represents.

The sample was comprised of two separate panels. The first was a sample selected from the 1976 cohort of the Health Interview Survey (HIS). The second was based on two samples drawn from Social Security Administration records: applicants for disability insurance (DI) benefits whose claims were denied in 1977 and DI beneficiaries whose entitlement began within 5 years prior to the survey. Of the total sample, approximately 6,900 were selected from the HIS, 4,600 from recent DI allowances, and 500 from recent DI denials.

All questions on the survey were answered by the sample respondent. In no cases were questions answered for the respondent by another person.

Disability Status

Self-defined disability status is derived from a set of questions on the questionnaire concerning health and work limitations.

The respondents are grouped into the following disability categories:

1. Severely disabled—Unable to work altogether or unable to work regularly.
2. Occupationally disabled—Able to work regularly but not at the same work as before the onset of disability or unable to work full time.
3. Secondary work limitation—Able to work full time, regularly, and at the same kind of work but with limitation in the kind or amount of work they can perform; persons with reported limitations in keeping house but not in income-producing work are included in this group.
4. Nondisabled—Persons with none of the above limitations.

All persons receiving DI benefits according to the Social Security Administration's administrative records were classified as severely disabled, unless they classified themselves as occupationally disabled.

Age

Respondent's age as of date of interview. Interviews were conducted from July through September 1978. An adult is defined as a person 18 years of age or older.

Labor-Force Status

1. **Employed.**—Employed persons comprise (1) all those who, during the survey week, did any work at all as paid employees, or in their own business, profession, or on their own farm, or who worked 15 hours or more as unpaid workers in a family-operated enterprise and (2) all those who did not work but had jobs or businesses from which they were temporarily absent due to illness, bad weather, labor-management dispute, or various personal reasons.
2. **Unemployed.**—Unemployed persons include those who did not work at all during the survey week, were looking for work, and were available for work during the reference period except for temporary illness.
3. **Full-time/Part-time employment.**—Part-time is 0 to 35 hours of work per week. Full-time is 36 hours or more of work per week.
4. **Labor force.**—The civilian labor force comprises the total of all civilians classified as employed and unemployed. This survey includes only those persons between the ages of 18 and 64.
5. **Not in labor force.**—All civilians 18 years of age and older who are not classified as employed or unemployed.
6. **Intermittent employment.**—Those full- or part-time workers who worked 25 weeks or less during the year before the survey are considered to have been intermittently employed.

Functional Illiterate

All respondents with less than 5 years of schooling were considered to be functional illiterates.

Family Income

Family income represents the total, combined income of respondent, spouse, and household family members age 16 or older. The counts and average amounts presented are based on individuals aged 18 to 64 who are members of families. If the respondent lives alone, family income consists of his or her income alone. Families with multiple members in the age group 18 to 64 will appear in the tables once for each family member. For example, a married couple will appear twice in the family income tables, once as the husband and once as the wife, and each would have the same family income.

The median family income represents the median income of families in which the individuals reside as opposed to median family income of the family unit. This, in effect, is a weighted median where families with multiple members are counted in the computation of the median once for each member. Thus the measure presented here will differ from the median family income for family units if the amount or distribution of amounts of family income vary according to family size.

Income includes earnings, income from assets, public income-maintenance programs, private pension plans, and Civil Service retirement plans.

Income from assets pertains to renumeration accumulated from capital in the form of rental property, real estate, dividends, annuities, government securities, savings accounts, and certificates of deposit.

Public income maintenance covers benefits from Social Security Old-Age and Retirement and Survivors Insurance benefits, Social Security disability retirement, Supplemental Security Income, Veterans Administration benefits, Unemployment Insurance Compensation, Worker's Compensation, Aid to Families with Dependent Children, Public Welfare benefits, and Railroad Retirement benefits.

Income Shares

The percent of the mean income or of the total aggregate income that was received from a specific source or combination of sources by all persons in the study or all persons in a class or group. The data shares of family income tables are, like the median family income data, weighted shares of family income; the weight being the number of persons aged 18-64 in the family. The sum of all income shares is 100 percent.

Family Poverty Level

The poverty level is determined by the size of family, family income, and the source of the family income (farm or nonfarm). The family size includes all persons living in the respondent's household.

To determine source of income the Primary Sampling Unit (PSU) code is checked. If the code indicates that the respondent lived in a rural area, the farm thresholds are used. If the code indicates that the respondent lived in an urban area, the occupation code is checked. If the occupation code indicates that the respondent had a farm or farm-related occupation, the farm thresholds are used; otherwise the nonfarm thresholds are used.

Poverty Thresholds

Size of family	Nonfarm	Farm
1 person	$3,075	$2,588
2 persons	$3,951	3,318
3 persons	4,833	4,093
4 persons	6,191	5,273
5 persons	7,320	6,247
6 persons	8,261	7,026
7 or more persons	10,216	8,708

Work Disability in the United States
A Chartbook

Work Disability in the United States: A Chartbook

Data from the Social Security Administration's most recent survey of the disabled in 1978 are presented in this publication. Like the 1977 edition, this chartbook presents information on demographic characteristics, disabling conditions, employment status, and income situation of noninstitutionalized disabled adults. New or expanded data include disability by sex and ethnic (Spanish) origin, disabilities caused by accidents and bad working conditions, extent of sensory limitations among disabled persons, and receipt of public income maintenance by the disabled and their families.
